

ASSET AND COMPLIANCE SURVEYS

Cognetix surveys are uniquely useful.

It's not just that our maps are clearer, or that information is backed up with time-stamped photographic evidence, or even the efficient, economical way in which the surveys are carried out.

The real benefit we bring is in the depth of our knowledge of the enforcement arena and the legislation governing it, so that we can give context to the information we gather and advise where change is necessary. We know what information is needed, when it needs to be gathered, and what it means. So our surveys don't just fulfil a regulatory requirement in an economical and timely manner, they provide a powerful tool for informed decision-making.

TRAFFIC COMPLIANCE SURVEYS

Traffic Compliance Surveys are initially used to establish the need for enforcement and to prioritise the enforcement strategy. Further surveys can then measure the level of effectiveness of the enforcement. Cognetix not only carries out such surveys but also helps the client to analyse and report the results.

TECHNICAL COMPLIANCE SURVEYS

The technical specifications for a Yellow Box Junction are highly complex and recent surveys have shown that around 70% of Yellow Box Junction's are non-compliant and therefore unenforceable.

Cognetix uniquely provide a range of technical compliance surveys to verify compliance with the Traffic Signs Regulations and General Directions legislation and also advise on any adjustments necessary to bring them into compliance.

SIGN ASSET REGISTER SURVEYS

To reliably enforce moving traffic contraventions every element of the process must be unchallengeable.

Sign Asset Register Surveys ensure that the enforcing signage is accurately placed, legal, correctly illuminated and in legible condition. Our reports contain the following elements:

- A colour-coded guide to every street involved.
- Notes on the condition of every sign and road marking, with date and time-stamped photographs and sub-metre GPS co-ordinates.
- Hard copy and maintainable e-copy with attribute filterable dataset.

STREET INVENTORY SURVEYS

A Cognetix Street Inventory survey provides an extremely clear map of relevant street 'furniture'. Our clear and detailed maps highlight any anomalies, such as vandalism and other damage. Available in both PDF and CAD format, they are powerful training aids for new CCTV operators and help support responses to representations and appeals.

COGNETIX – THE WORD ON THE STREET
