

COMPLETE SYSTEM DESIGN AND DELIVERY SERVICE

A complete turnkey design and project management service for the specification, planning, procurement, implementation and operation of CCTV systems from lens to ticket.

Cognetix are the leading independent consultants in enforcement CCTV system design and project management leveraged by its breadth and depth of expertise.

A fully integrated CCTV system is more than just cameras, it is a conduit for gathering and transmitting information, then presenting and processing it in a useful manner. Planning and implementing such a system requires a holistic, multi-discipline project management approach and an in-depth technical knowledge of all the options available at every link in the chain.

This is what Cognetix is uniquely placed to provide.

COMPLETE SYSTEM DESIGN AND IMPLEMENTATION

Uniquely, Cognetix assign a consultant and a project manager to each project to ensure that not only is the best fit-for-purpose solution being utilised at every stage, but that every stage is being reached in a managed, timely and benchmarked fashion.

Feasibility Studies, in conjunction with compliance surveys, include high-level design and budget estimates. They help mould enforcement strategy, with sufficient detail to support funding bids.

Cognetix then produce the **System Design Specification**, together with the Health & Safety pre-tender file in our capacity as planning supervisors under CDM regulations.

Procurement is, of course, a major part of the process, and one for which Cognetix provide a comprehensive administrative function. From compiling and dispatching the ITTs (including EU tendering where necessary), to handling queries and creating evaluation models, the process culminates in the production of the Tender Evaluation Report.

Once the contracts are awarded, the process moves to the **Delivery** stage, where we act as Engineer, offering full contract administration. We technically witness the FATs/SATs as part of the issuing of commissioning certificates and perform regular site inspections to monitor progress, enabling us to liaise closely with the installer and the power, transmission and civils sub-contractors, pro-actively managing the complex interactions between them to effect a smooth and timely completion.

Being experts in all legal and regulatory requirements governing the traffic enforcement arena, Cognetix ensure that every part of the system, from the cameras to the capture and review systems are fully compliant and fit-for-purpose.

COGNETIX – THE COMPLETE SOLUTION
